

**2022 DRAGON 5 SYMPOSIUM**  
**MID-TERM RESULTS REPORTING**  
**17-21 OCTOBER 2022**

**PROJECT ID. 57979**

**MONITORING HARSH COASTAL  
ENVIRONMENTS AND OCEAN SURVEILLANCE  
USING RADAR REMOTE SENSING**

**OCTOBER 17, 2022**

**ID. 57979**

**PROJECT TITLE: MONITORING HARSH COASTAL ENVIRONMENTS AND OCEAN SURVEILLANCE USING RADAR REMOTE SENSING**

**PRINCIPAL INVESTIGATORS: F. NUNZIATA & X. YANG**

**CO-AUTHORS: A. BUONO, G. GRIECO, L. GAO,  
J. GUO, A. MARINO, W. SHAO, S.  
WANG, Q. XU, X. XU, G. ZHONG**

**PRESENTED BY: F. NUNZIATA**

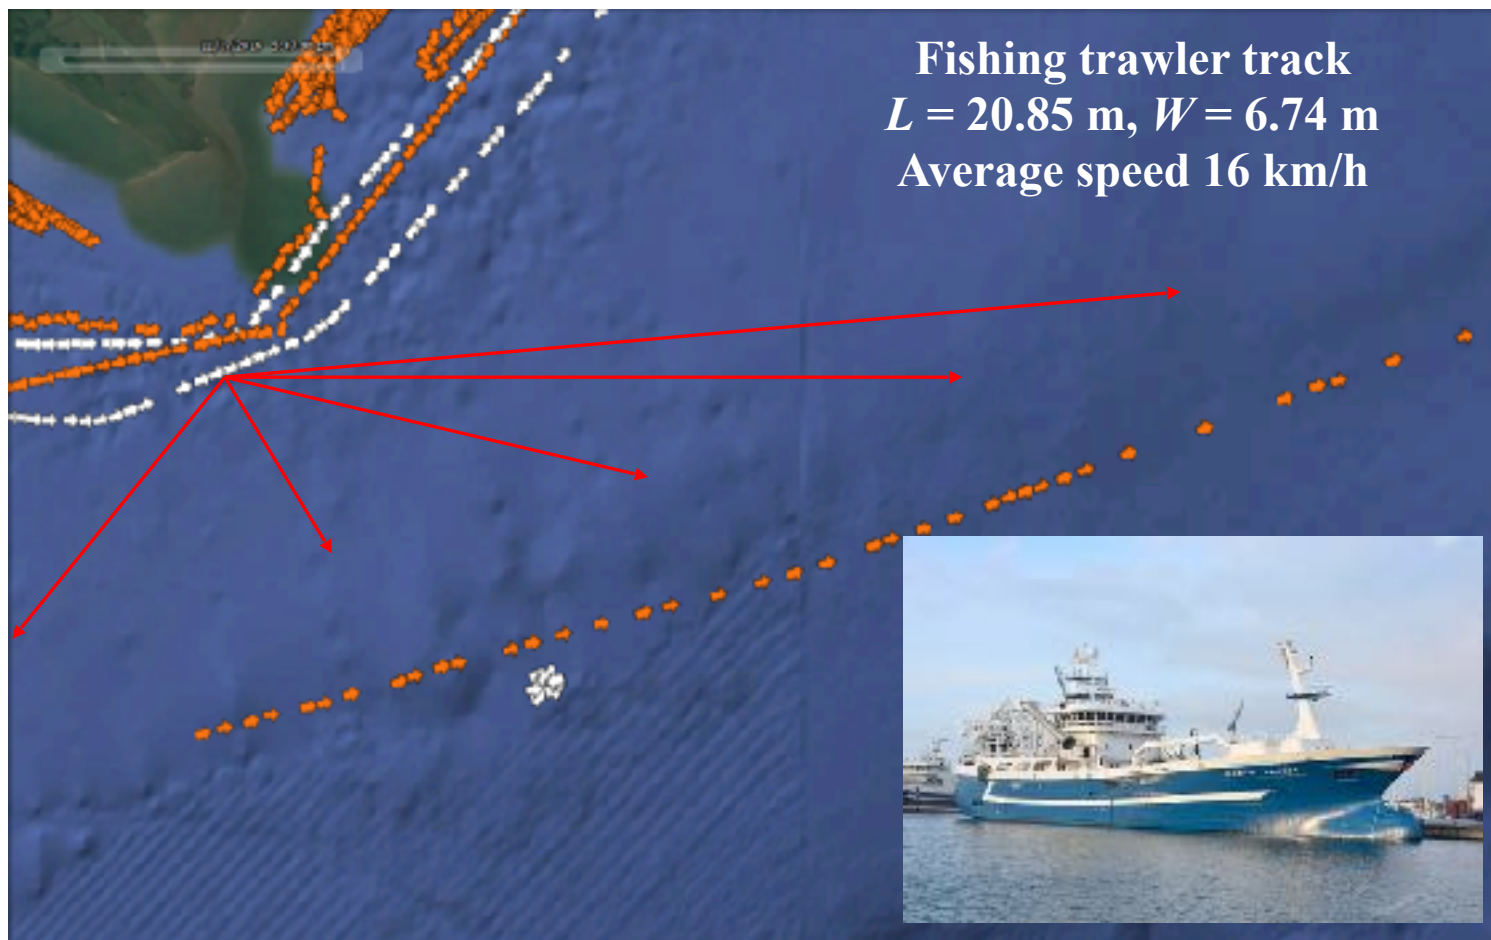

- Ocean & coastal zone thematic area
  - Marine dynamic environment
  - Sea surface characteristics

**The project aims at exploiting Synthetic Aperture Radar satellite measurements to generate innovative added-value products to observe coastal areas characterised by harsh environments, even under extreme weather conditions.**

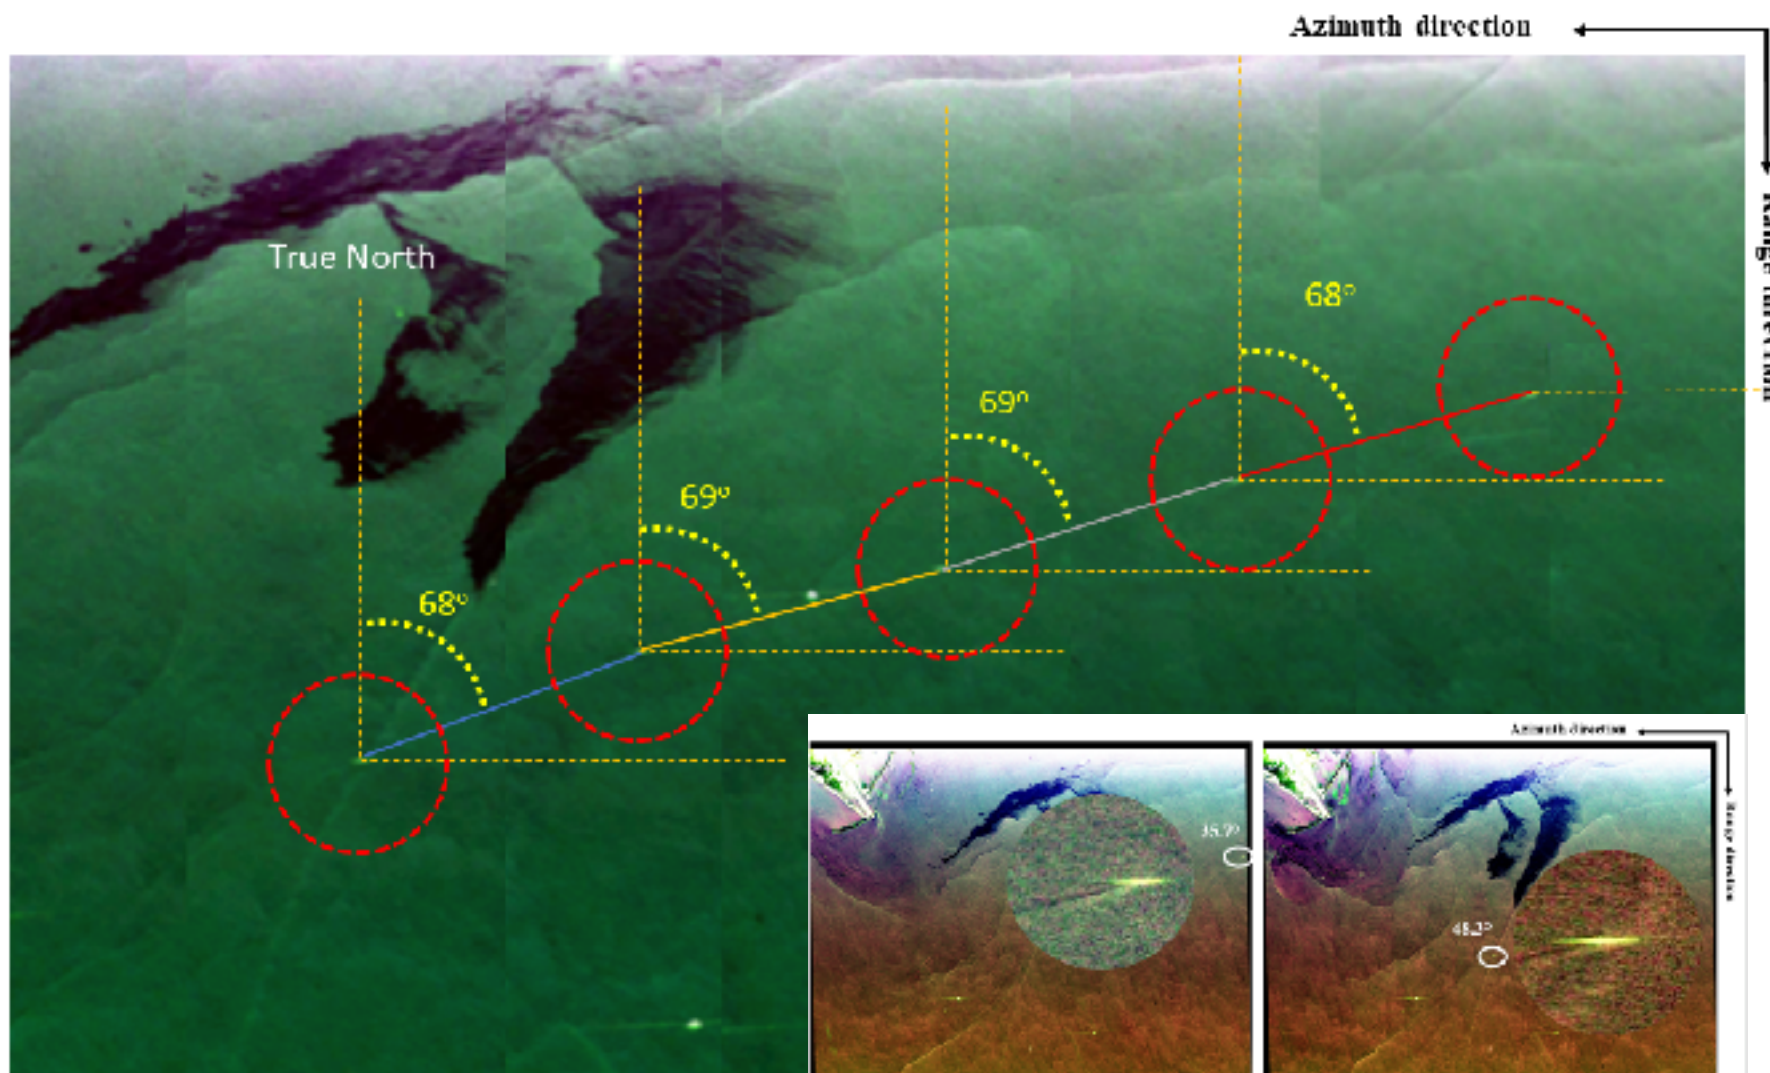

- Ship backscattering vs incidence angles
- Backscattering from offshore wind farms
- Backscattering from oil emulsions
- Bistatic scattering from oil-covered sea surface
- Backscattering under wave breaking conditions

- **Gulf of Mexico on 17/11/2016.**
- **Time series of UAVSAR imagery.**
- **Five SAR scenes collected over the target spanning two hours acquisitions.**
- **Wide incidence angle range,  $35^\circ - 49^\circ$ .**
- **Low-to-moderate sea state conditions, wind speed in the range 1 m/s - 5 m/s.**

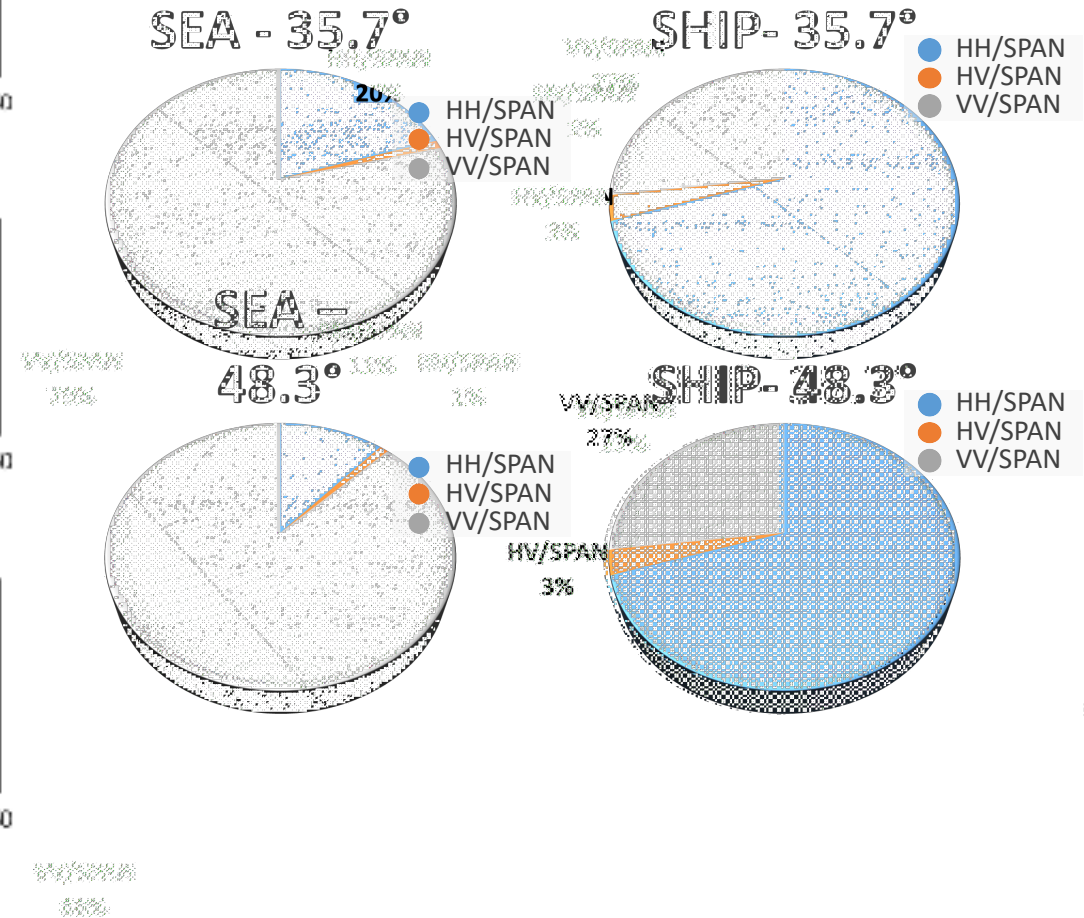

UAVSAR polSAR data set

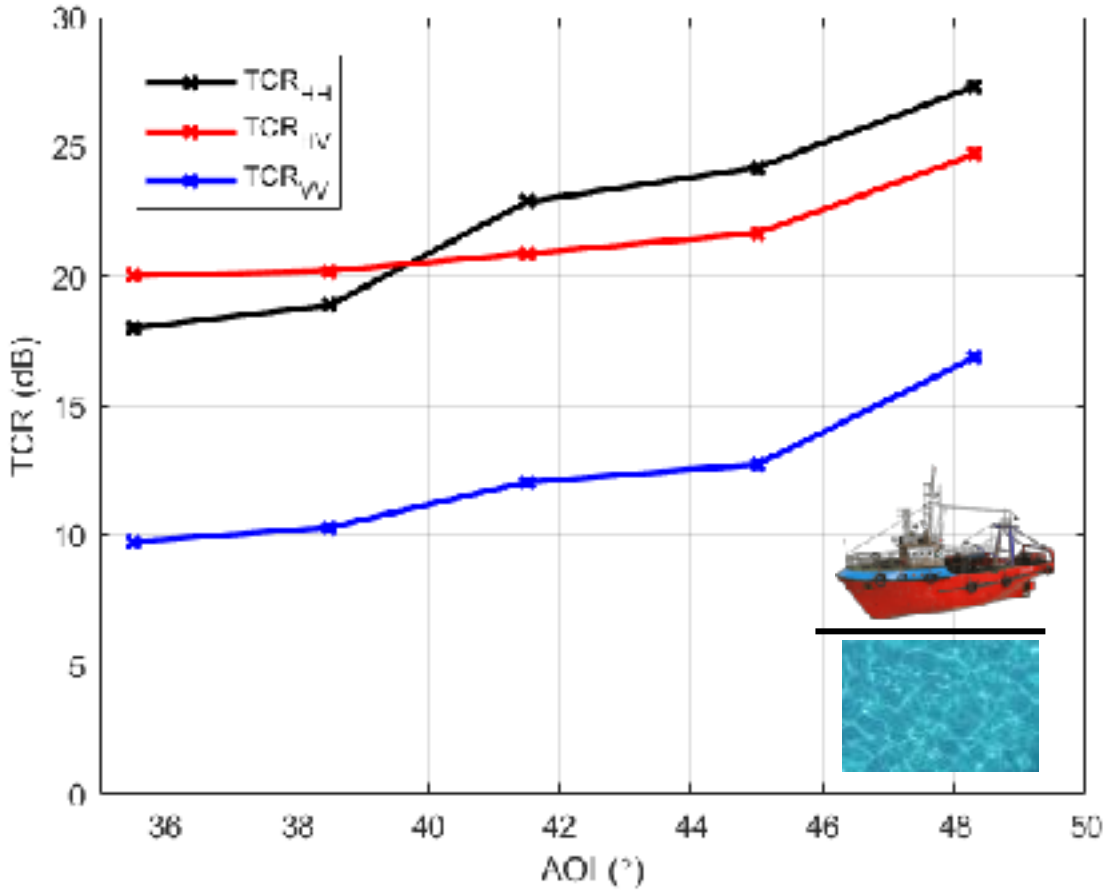

Multi-pol NRCS contribution relative to the SPAN

Multi-pol Target-to-Clutter Ratio

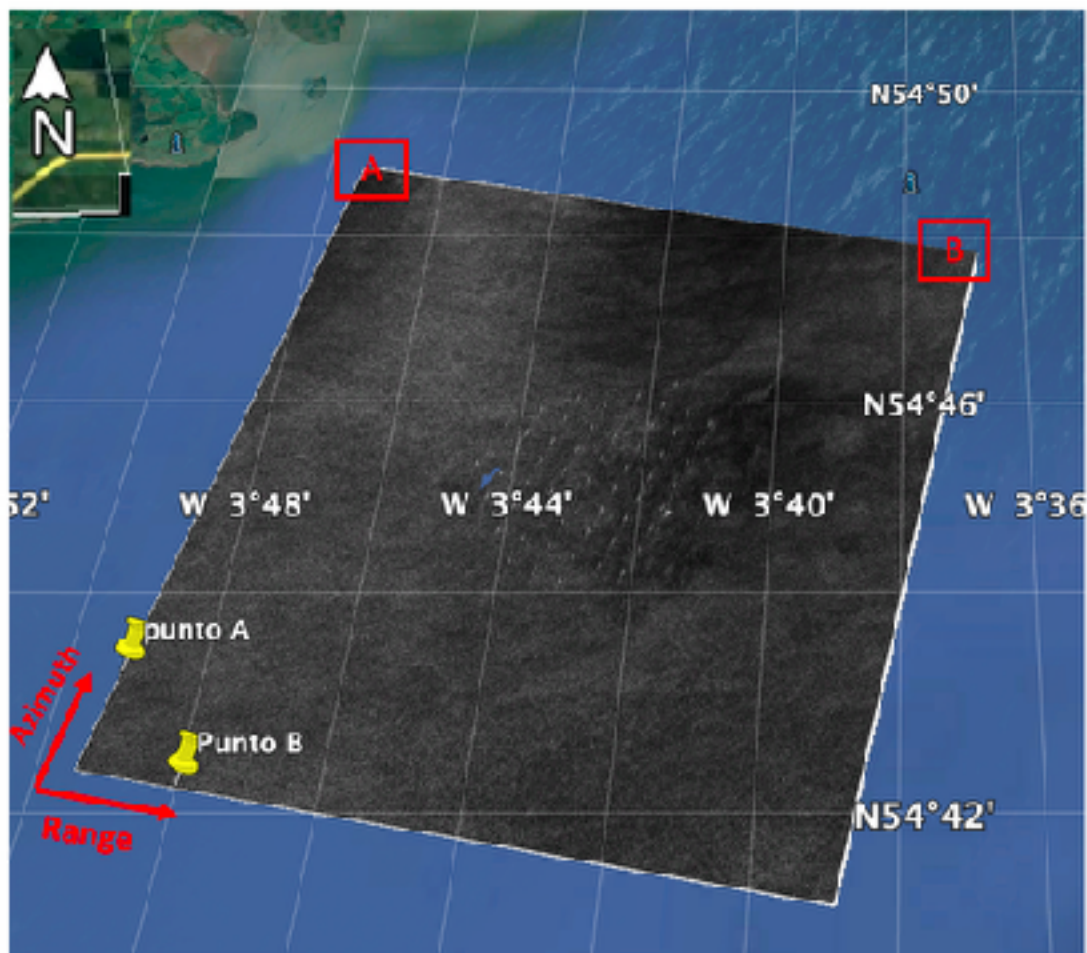

Co-polarisation signature of the ship

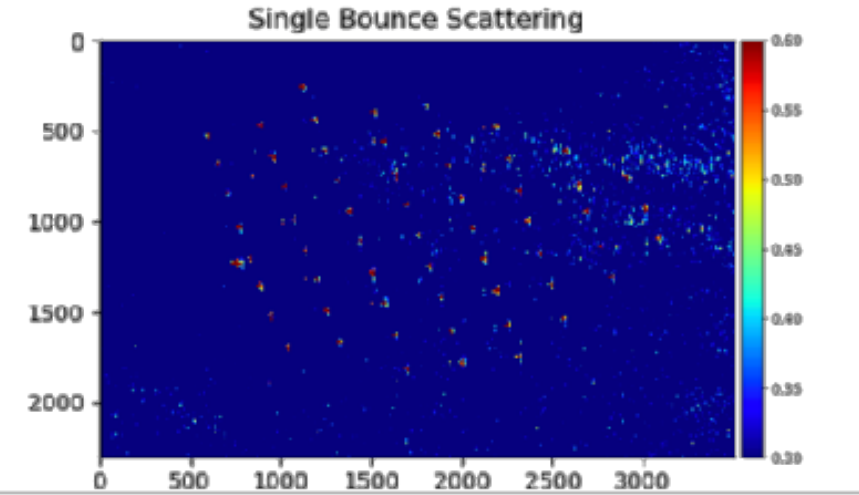

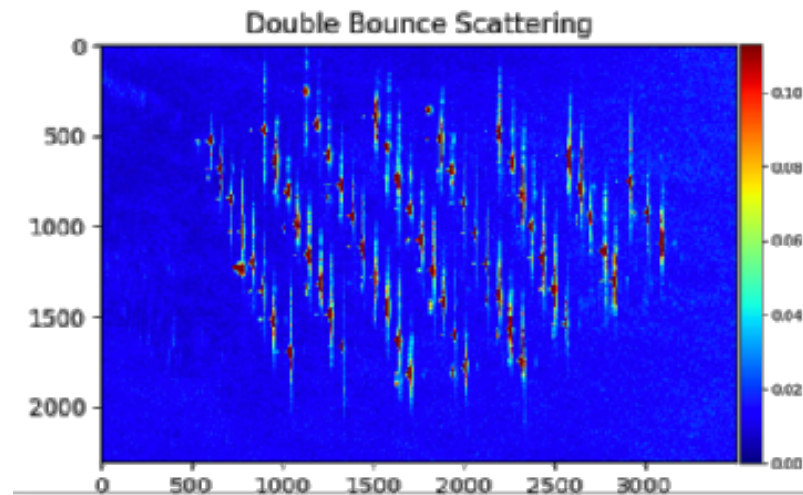

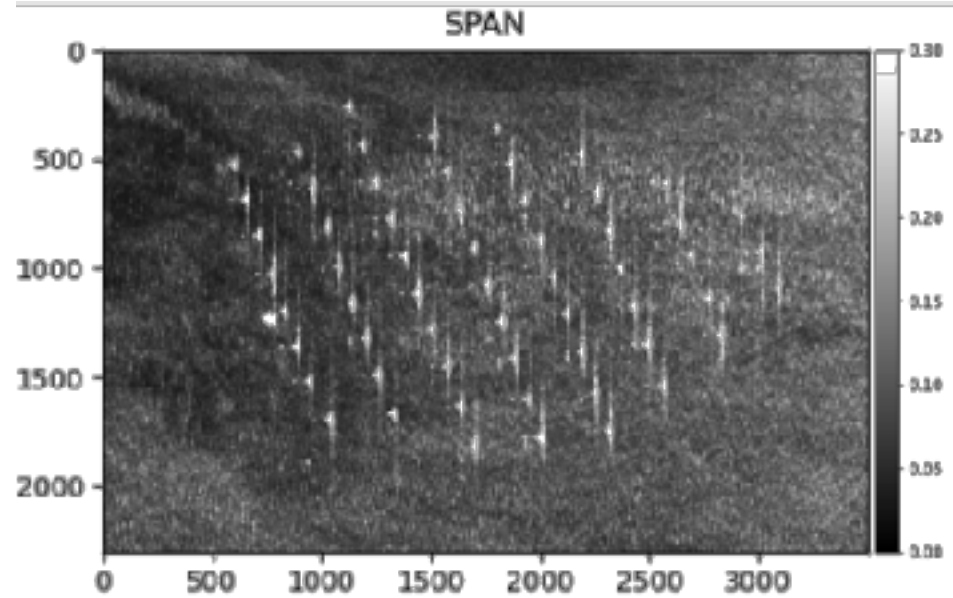

- Ship backscattering vs incidence angles
- Backscattering from offshore wind farms
- Backscattering from oil emulsions
- Bistatic scattering from oil-covered sea surface
- Backscattering under wave breaking conditions

Robin Rigg OWF (Solway Firth, UK): PAZ X-band polSAR measurement

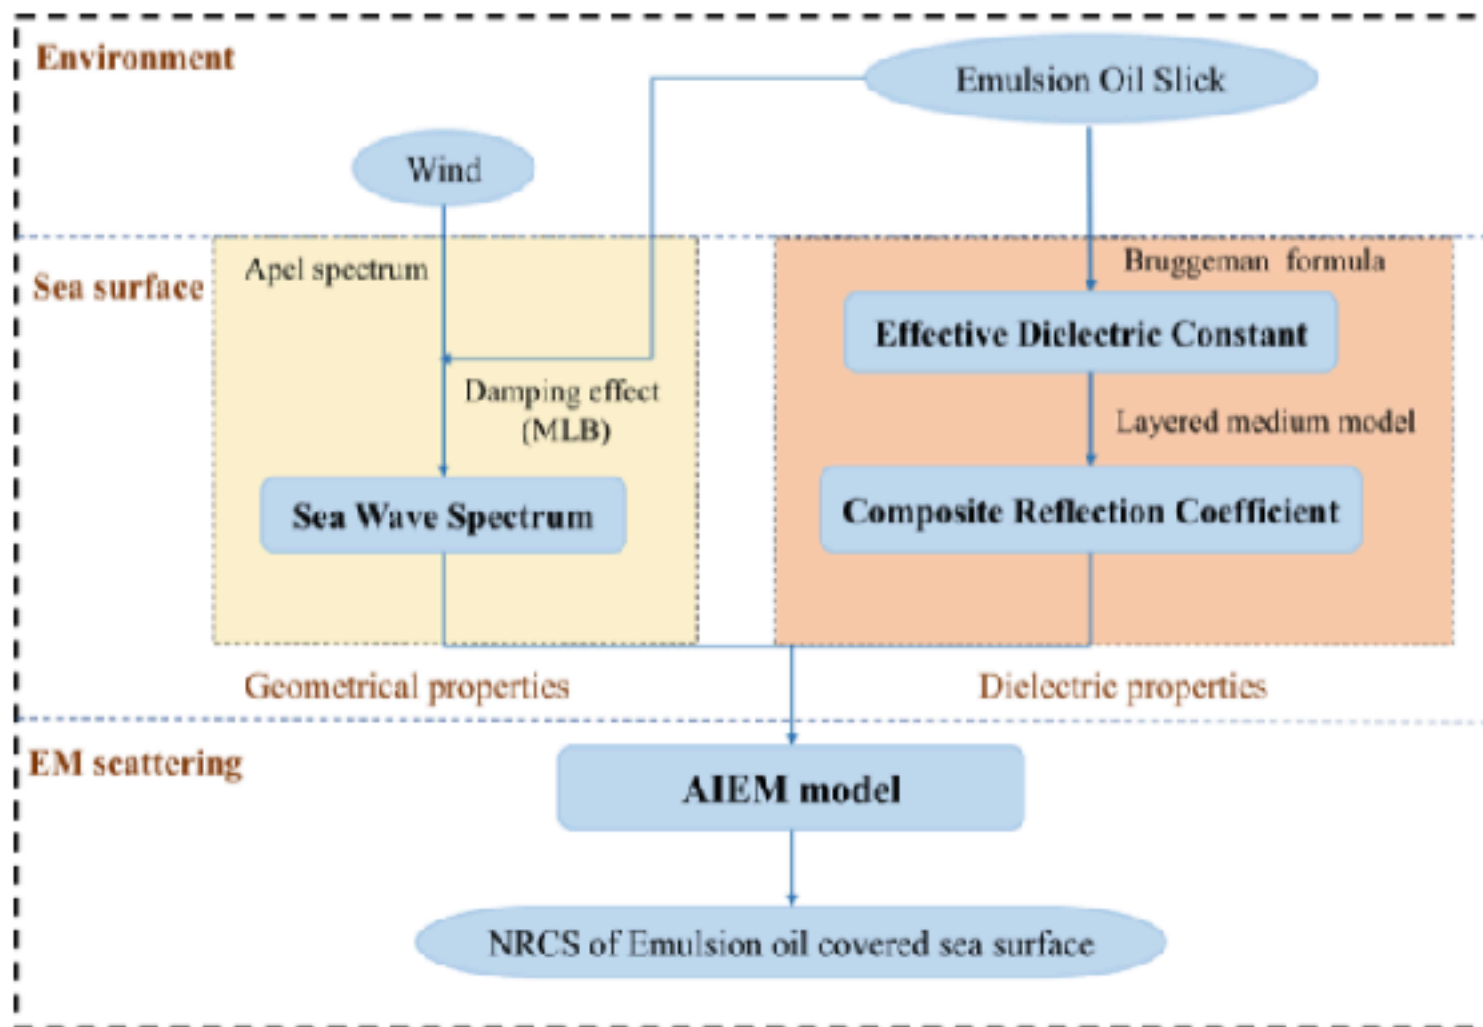

## Wind turbine backscattering decomposition

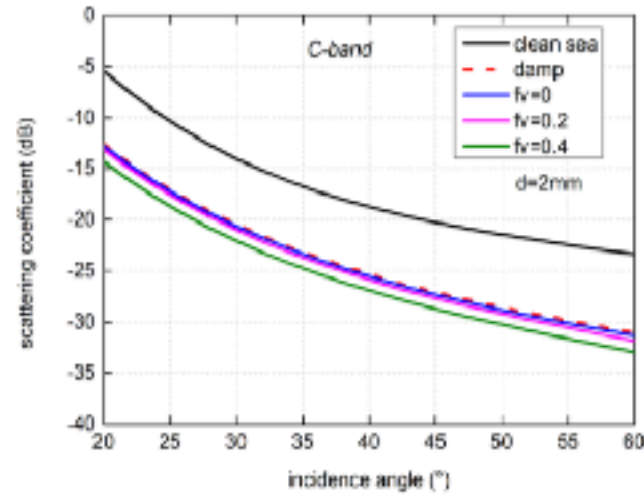

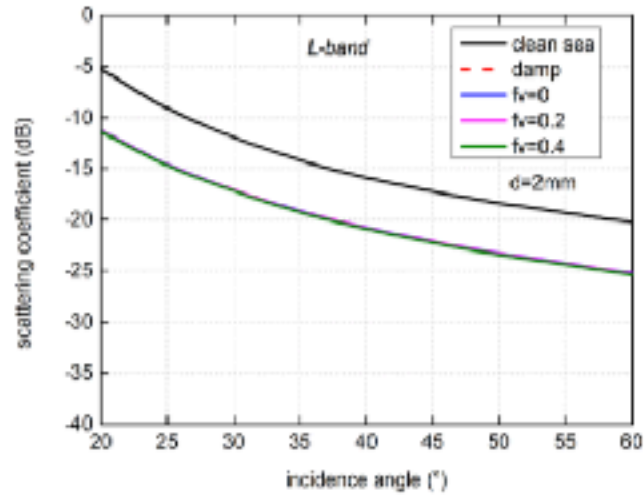

- Ship backscattering vs incidence angles
- Backscattering from offshore wind farms
- **Backscattering from oil emulsions**
- Bistatic scattering from oil-covered sea surface
- Backscattering under wave breaking conditions

Multi-frequency simulation of scattering from marine oil emulsion

## Backscattering coefficient versus incidence angle at L-, C- and X-band

- Ship backscattering vs incidence angles
- Backscattering from offshore wind farms
- Backscattering from oil emulsions
- **Bistatic scattering from oil-covered sea surface**
- Backscattering under wave breaking conditions

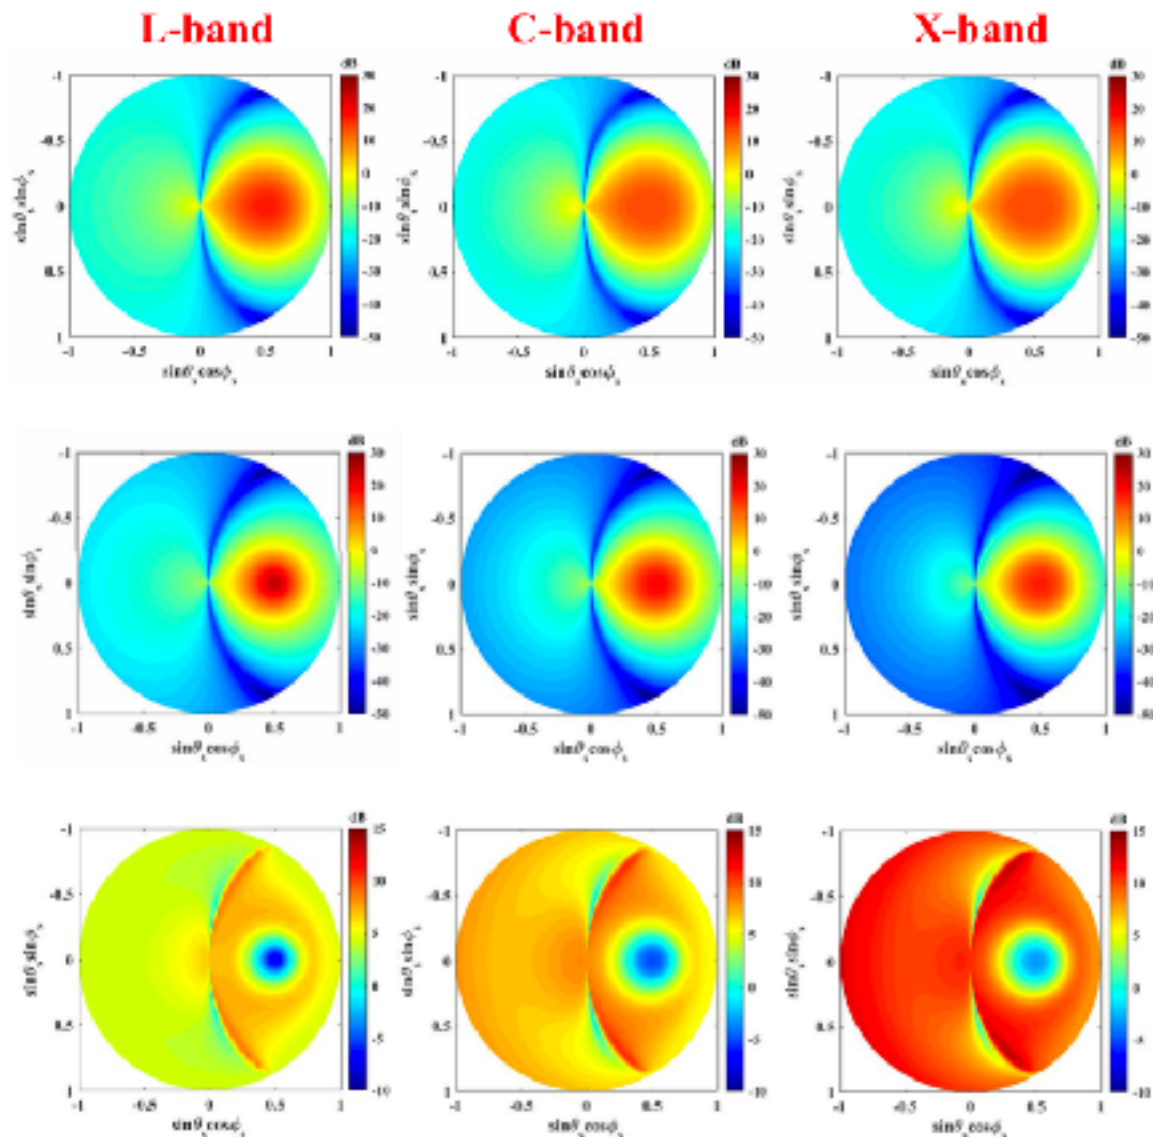

Bistatic scattering geometry of oil-covered sea surface

**The bistatic radar scattering coefficients related to an oil-covered sea surface are predicted by modeling:**

- **The oil damping effect on surface roughness**
- **The oil modification on the dielectric properties of the scattering surface**

**The bistatic scattering is predicted using the AIEM.**

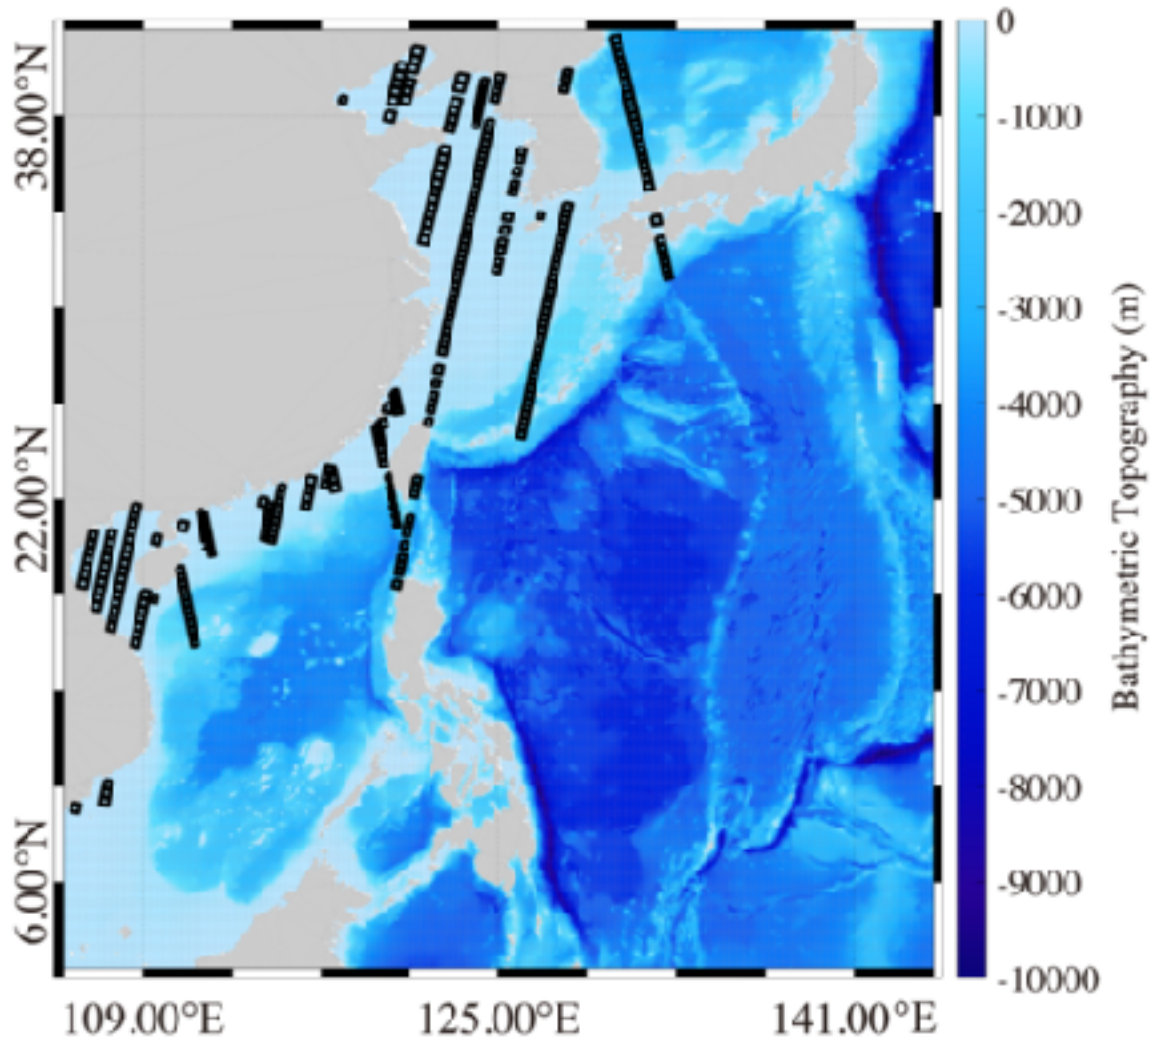

Multi-frequency bistatic scattering analysis

**Bistatic scattering is depicted in the form of the unit circle:**

- Left semicircle  $\rightarrow$  backscattering
- Right semicircle  $\rightarrow$  forward scattering
- Horizontal axis crossing the origin of the circle  $\rightarrow$  plane of incidence ( $\phi_s = 0^\circ$  or  $180^\circ$ )
- Vertical axis crossing the origin  $\rightarrow$  cross-plane ( $\phi_s = 90^\circ$  or  $270^\circ$ );

- Ship backscattering vs incidence angles
- Backscattering from offshore wind farms
- Backscattering from oil emulsions
- Bistatic scattering from oil-covered sea surface
- Backscattering under wave breaking conditions

Gaofen-3 C-band SAR measurements

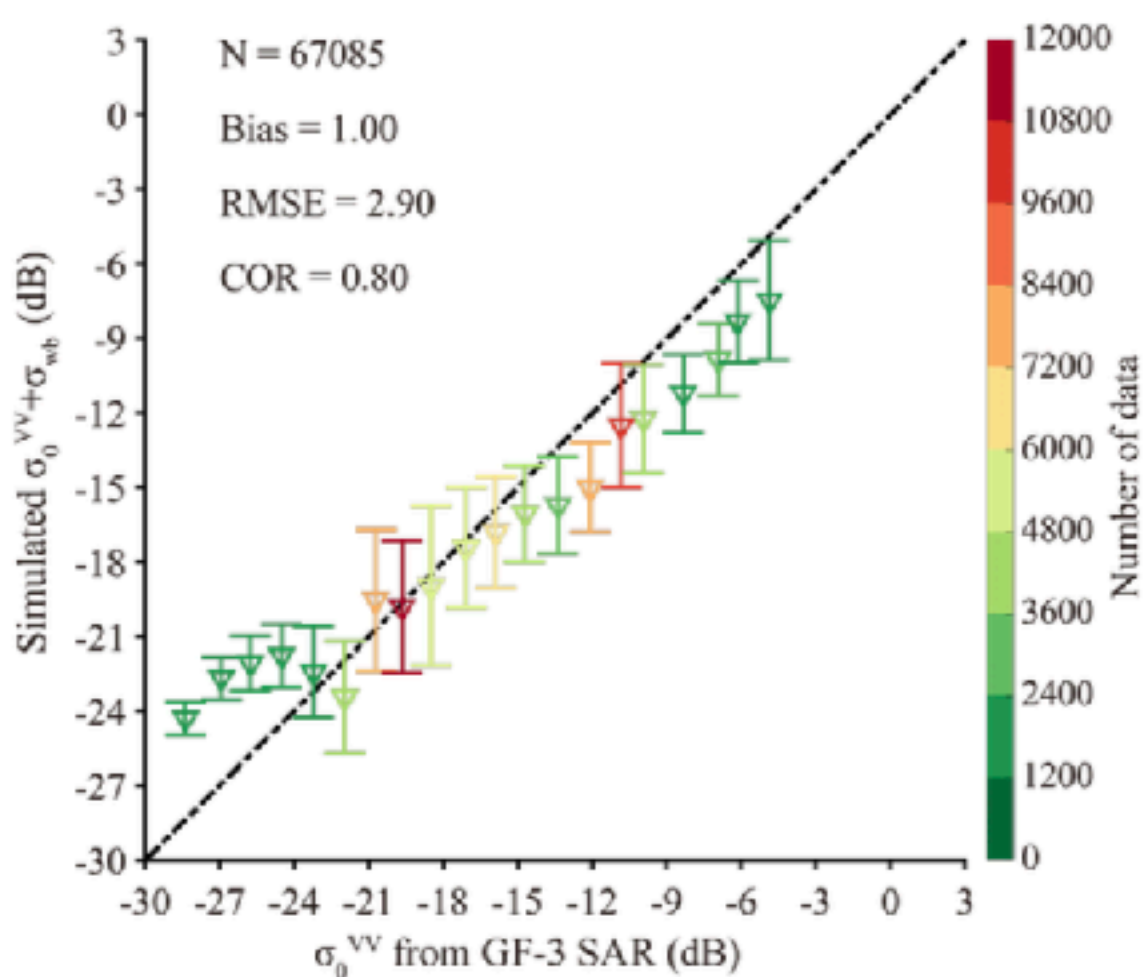

$$\sigma_{qq}^0 = \sigma_b^0 + \sigma_{wb}^0$$

$$\sigma_{wb}^0 = \sigma_{vv}^0 - \frac{PD}{(1 - PR)}$$

1. Two-scale surface scattering model
2. Simplified approach

Predicted versus actual VV-pol NRCS

ESA Third Party Missions	No. Scenes

- **Backscattering from offshore wind farms**
- **Comparison of microwave backscattering from slick-covered sea surface predicted using different scattering and damping models**
- **Retrieval of oil thickness**
- **Classification of harsh coastal environments using polSAR multi-frequency measurements**

## **Academic exchanges, cooperation, contribution to Dragon 5 training**

1. Zoom meetings monthly
2. Visiting scientists exchanges: we hosted a Chinese PhD student working on scattering from oil emulsions for 1y

**The project aims at demonstrating the benefits of radar products for coastal area monitoring and, therefore, it is framed into the “Ocean & coastal zone” Dragon-5 thematic area.**

- The co-operation was successful in all the topics
- A Chinese PhD student spent a 1y period @ Uniparthenope
- Pandemic restrictions that still apply in PR China limited the exchange of students
- The activities scheduled for the next year are already ongoing
